

Responsive Web App Working Principle

Create a responsive Web Page in simple HTML

- ✓ Nothing else is needed.
- ✓ Just create it.
- ✓ See it adapt to device screen landscape

Questions:

- ✓ How does it work? Explain with examples
- ✓ Serve the HTML page from any HTTP server you like.
- ✓ Use any Technology stack to do the following:
 - The HTML file is being reversed- proxied by your application
 - Do not let it respond to device screen. Always stick to PC view.
