

# PROJECTS

- Open Source
- Full Stack Engineering
- Backend focused
- Applied AI
- Multiple Databases- SQL , NoSQL, KV, CDB, SE
- Real-life consumable use case

# WhatsApp AI Assistant

- A self-hosted solution
- No investments
- Organize Yourself managing WhatsApp message Sending.
- Good for your eyes - Little screen time
- Automate tasks – as you need
- OPTIONAL - Expose-As-a-Service for others if you're using a Business account [Cut down cost on 3rd third party commitment and dependencies]

# Courier & Shipment Tracker Agent

- Track shipments via Agentic AI
- No hassle to open websites Less screen time for eyes
- Single and Bulk Shipment tracker feature
- Use free-to-use, usage-capped API
- Notification to user.
- Optional – integrate with your smart gadget such as TV / Panel, Alexa , Google Home etc.

# AI driven Dev Set up

- Cut down on cost and initial hiccups on DEV environment set up
- Let your Agent do it.
- When ready get notified
- Expose Webhook for integration
- Optional – integrate with your smart gadget such as TV / Panel, Alexa , Google Home etc.

# RAG driven self organizer

- Do not compromise on your privacy
  - Do not just let free cloud providers someday predate you!
- Self-hosted, offline document management system
- Get important information without hassle.
- Security - you own and protect you documents
- Optional – accessible via smart gadgets like TV with End-to-End security
- Optional- Print your documents when you need.

# RAG driven website chat Assistant

- These will be generic plug-n-play components
- Scrape the site and prepare vector data for similarity search
- Chatbot component uses RAG paradigm to answer question.
- Fine tune in cycles

# IoT and AI Agent

- These will be IoT devices that you make and program integrated with the Agent you own yourselves
- INDIA – User haziness on privacy policies of cheaper IoT gadgets
- Automate your home.
- Make your device – program it.
- Build your Agent (Text +Voice) and integrate
- Keep in within home Network
- Optional- tunnel to expose to legitimate owners

# Omni Channel Notification Engine

- Notification across multiple channel
  - SMS
  - WhatsApp
  - Email etc.
- Consent Management does matter in business compliance & user privacy
- Expose event hook – for others to use it
- Differential notification clustering based on message type
- Queue backed – Resilient to events of channel outage.
- OPTIONAL - expose as service if you want to make business & integrate with a CDP

“

- Many more topics to be added  
Let heterogenous technology stacks NOT hold you back .

Get accustomed to industry-ready skills and assimilate the essence of Engineering
